models.py

```python
from django.db import models
from django.contrib.auth.models import User

class Room(models.Model):
    ...
    class Meta:
        ordering = ['-updated', '-created']
```

forms.py

```python
from django.forms import ModelForm
from .models import Room

class RoomForm(ModelForm):
    class Meta:
        model = Room
        fields = '__all__'
        exclude = ['host', 'participants']
```

views.py

```python
from .models import Room
from .forms import RoomForm

def updateRoom(request, pk):
    room = Room.objects.get(id=pk)
    form = RoomForm(instance=room)
    ...
    if request.method == 'POST':
        form = RoomForm(request.POST, instance=room)
        if form.is_valid():
            form.save()
            return redirect('home')
    context = {'form': form}
    return render(request, 'base/room_form.html', context)
```
